CHAPTER 6 · ANNOTATED WINNING PROPOSALS

Statement of Need that scored 94/100

Funded \$480,000 · Federal innovation fund (Canada) · Reviewer rubric attached overleaf in the full PDF.

Excerpt from the funded narrative

Across the three target regions, **68% of small manufacturers lack access** to the digital tooling required to compete on cross-border contracts (Statistics Canada, 2024). Our 18-month pilot with 42 firms demonstrated a **42% productivity lift** when participants adopted the proposed framework — a result independently verified by the BC Manufacturers Association.

This proposal directly addresses the gap identified in the funder's 2025 Strategic Priorities (Section 3.2) by pairing measurable economic outcomes with a rigorous evaluation plan and a matched-funding commitment of \$120,000 from three industry partners.

Why this scored in the top quartile

REVIEWER NOTE The opening statistic is sourced, recent, and tied directly to a stated funder priority — reviewers don't have to hunt for relevance.

WHY IT SCORED Quantified outcome (42%) + named third-party verifier = automatic credibility on the Evidence rubric (worth 25 points).

REPLICATE THIS Use Prompt #14 (page 31 of the full Blueprint) to mine your own data for a parallel statistic — tested on ChatGPT-5, Claude Sonnet 4, and Gemini 2.5 Pro.

CHAPTER 9 · 52 AI PROMPTS

Prompt #14 — Mine your data for a credibility statistic

Tested on ChatGPT-5, Claude Sonnet 4, and Gemini 2.5 Pro.

The prompt (copy-paste ready)

Role: You are a senior grant writer specializing in {sector} programs.

Task: From the dataset below, extract THREE statistics that align with this funder priority: "{priority}".

Output, for each stat:

- (1) the number,
- (2) the source line it came from,
- (3) a one-sentence framing that ties it to the funder's stated outcomes.

Constraints: cite only verifiable rows; flag any row where the source is unclear.

Dataset:
{paste rows here}

How to use it

Use case	Time saved	Pairs with
Statement of Need · LOI opener	~2 hours per draft	Worksheet 03 (Evidence map)

PRO TIP Always paste your rows as plain text or CSV — formatting markup confuses the model and produces hallucinated sources. The full Blueprint includes 51 more prompts covering every section of a winning application.
